Introduction

Purpose: This dashboard provides a comprehensive overview of travel booking performance to monitor business health, analyzing trends, customer behavior and identify growth opportunities.

Target User: Designed for business leaders, product managers to get an overview of business performance, customer behavior and therefore, support data-driven decision-making.

Key areas to be analysed:

- Overview
- Revenue & Sales Analysis (Revenue break down by month, week, date, seasonality)
- Route Analysis
- Customer behavior (Age group segmentation, Sales, discount, cancellation rate)

Note: *Data source using is from confidential company data so raw dataset or exact dashboard cannot be shared*

Data: Overview

- **Data period:** Data provided is from March 2023 to May 2023.
- **Size:** 20 columns, 19,096 rows
- **Fields:** passenger gender, age, ticket status, created date, departure & arrival date, depart from, arrival to destination, ticket price

Data: Outlier

Row	Min_price	Max_price	Ave_price
1	3000	9010800	1044120.735232...

Price Analysis

- **Min price is low (3,000 VND/ticket)** in comparison with **average flight ticket of 600,000 VND/ticket** (based on desk research)

Row	seat_class	total_order	ave_ticket_price
21	K	107	1400396.0
22	Q	102	1638761.0
23	*null*	95	696262.0
24	H	95	1186072.0
25	K1_ECO	94	1555018.0

Row	seat_class	ticket_status	total_order
1	*null*	New	50
2	*null*	Paid	45

Seat Class Analysis

- There are **95 orders with no value of seat class**
- These orders are either **New or Paid. So the data need to be reviewed**

Row	Min_age	Max_age	Ave_age
1	-1	999999	82.64093028128...

Age Analysis

- Min age and max age are incorrect value, affecting the average age
- This could happen due to user input → Need to **set age limit in user platform** to filter out incorrect value

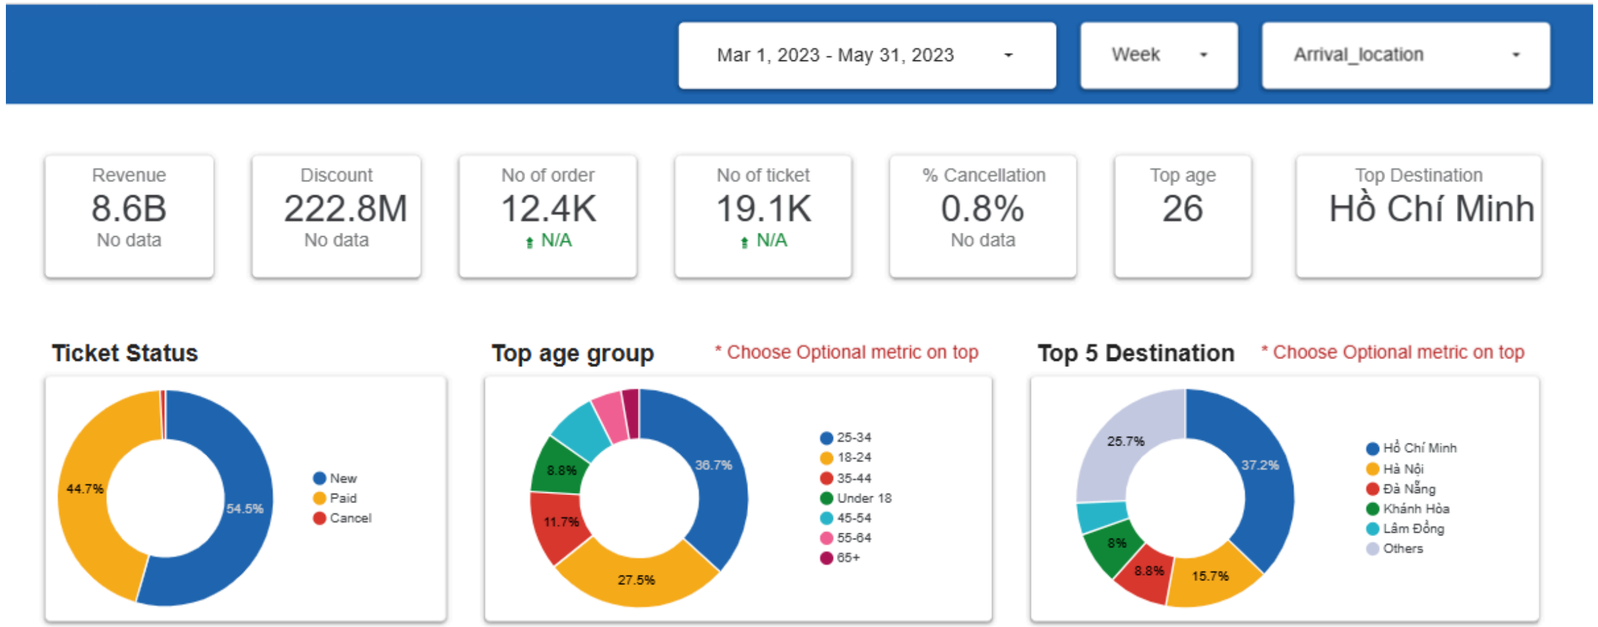
Data: Major Changes

Tool: Google BigQuery

Changes:

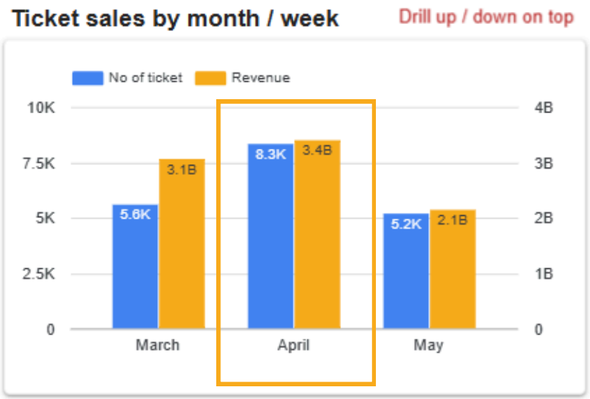
- Seperated “from_to” fields into 2 different columns for Departure & Arrival location
- Create segmentation for age groups:
  - Under 18
  - 18 to 24
  - 25 to 34
  - 35 to 44
  - 45 to 54
  - 55 to 64
  - 65 and above

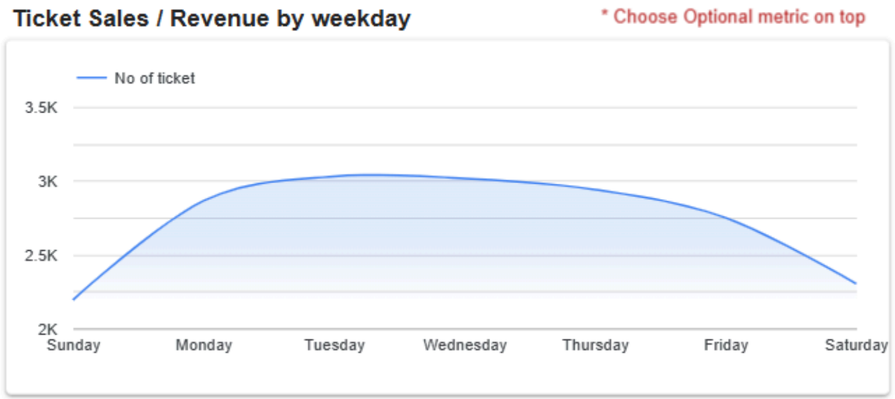
Finding: Overview

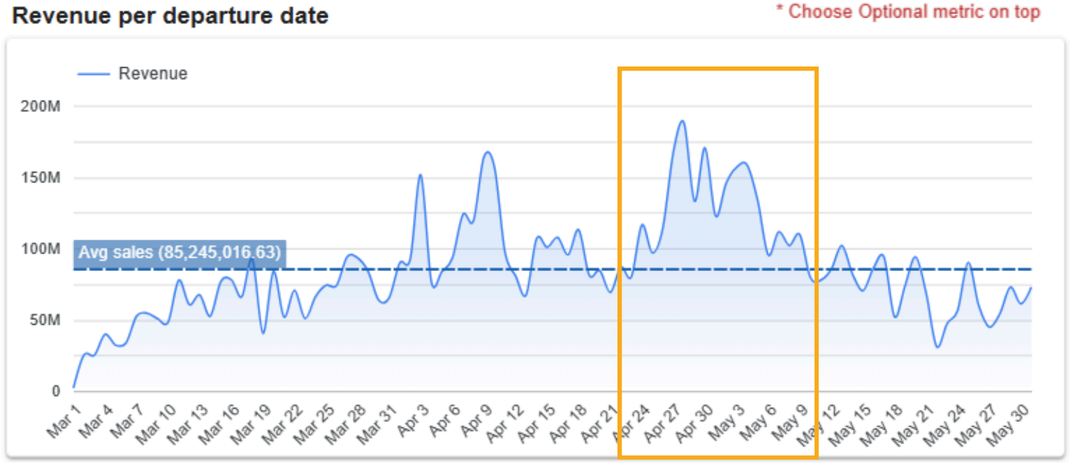


- **Data period:** Data provided is from March 2023 to May 2023.
- **No reorder customer:** Through EDA, no reorder customer is found during provided period (based on field passenger_id)
- **Revenue: Total revenue is 8.6Bil** (only considered ticket with **status "Paid"**)
- **Ticket status:** 54% tickets were in status "New", 45% were "Paid" at the recording period. Cancellation rate is 0.8%
- **Common customer age group:** Sales are heavily driven by **younger customers**, with **66% of revenue generated by users under 34**, and **peak sales occurring at age 26.**
- Top destinations in the period is: Ho Chi Minh, Ha Noi, Da Nang, Khanh Hoa, Lam Dong

Finding: Revenue & Sales







Monthly review

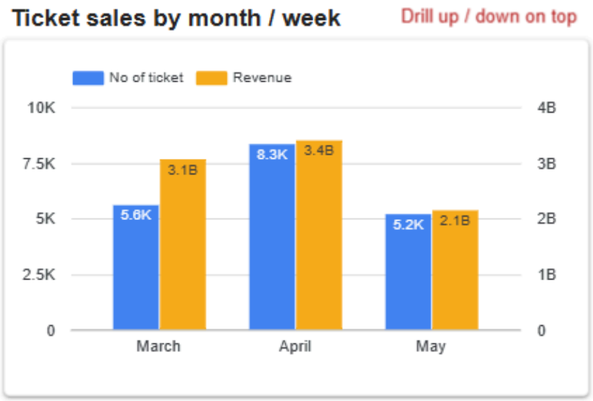
Insight

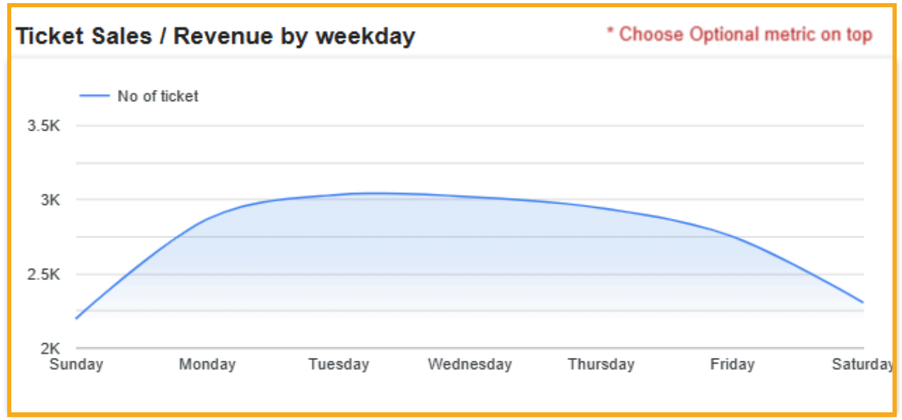
- **April is the month with highest sales,** contributing 3.4Bil (~40% vs total revenue)
- The upsurge sales in April can be explained when looking at revenue per departure date. **Most days with high sales amount** are in **period Week 17 - Week 18,** which is near Vietnam national holiday (Week 18: 30-Apr & 1-May)

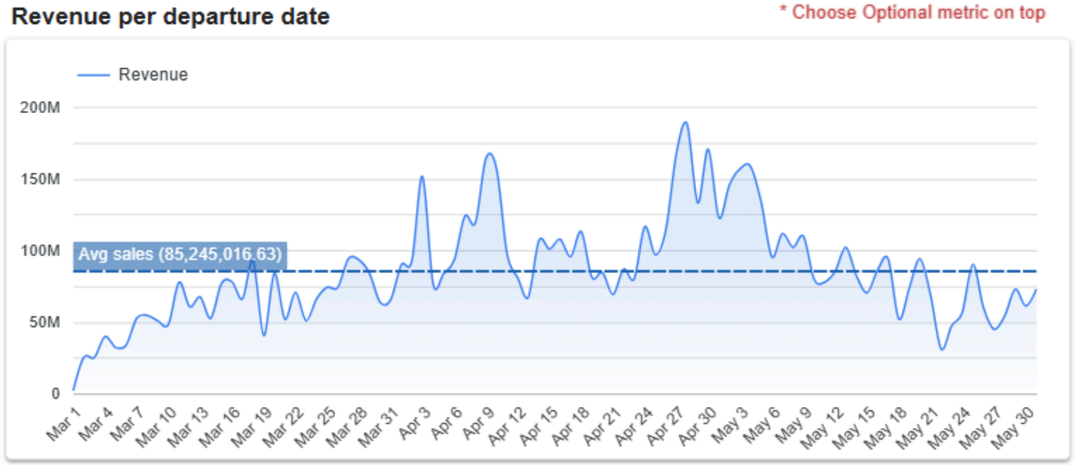
Actionable recommendation

- Review more historical years data to identify whether the trend is repeated & **forecast future high-demand dates**
- **Plan capacity, pricing, and marketing campaigns** around peak periods
- **Data for booking created time** can be provided to further analyse **customer ordering patterns** across different hours of the day.

Finding: Revenue & Sales







Weekday review

Insight

- Further analysis shows most bookings are **placed within working weekday**, while **weekend has lowest booking rate**

Actionable recommendation

Improving ticket sales in weekend:

- Introduce more **weekend-only promotions or flash deals**
- Push **reminders or price locks** for users who search on weekends but don't book

Finding: Route Analysis

Highest Sales Route

Nghệ An	140,079,660	3,755,000	0	25,631,400	30,784,230	10,184,590					

Insight

- Revenue is **highly concentrated in a few major routes,** with departure or arrival location mostly in major cities: Ho Chi Minh, Ha Noi, Da Nang, Khanh Hoa, Lam Dong
- Meanwhile, many other routes show very small to zero revenue.

Actionable recommendation

- **Improve top route experience:** Double down on premium experience, pricing optimization, upsell opportunities, and operator quality on top routes.
- **Explore upsell opportunities for low and mid-tier routes:** At the same time, stimulate demand for these routes using targeted promotions or bundles.

Finding: Customer Behavior

Ticket sales by age group

1 - 7 / 7

Insight

- Young adults from the 2 age groups **25–34, 18-24** are the **core revenue & sales volume driver**
- Meanwhile, **older generation with age above 55** contribute **lowest sales volume**
- **Average ticker price for most group is 1.1mil/ticket**, while Under 18 group has lower price of 830k VND/ticket
- Average discount ranges from 20,000 VND - 29,000 VND per ticket, which is not significant compared to average ticket rate (discount ~1.8%)
- **Cancellation rate is ~1%** for all age group with the revenue lost due to cancellation ranging from 950k VND - 1.5mil VND/person.

Actionable recommendation

- **Deeper analysis on customer journey, experience for each age group:** to understand their main characteristics and increasing booking conversion rate through optimizing app, payment process, promotions

Recommendation Summary

- **Prioritize peak-season planning:** April generated the highest sales, contributing around 40% of total revenue; plan pricing, seat capacity, and marketing campaigns earlier around national holidays and high-demand weeks.
- **Improve weekend conversion:** Since bookings are lowest on weekends, launch weekend flash deals, app push reminders, and price-lock offers to capture users who browse but delay booking.
- **Double down on top-performing routes:** Revenue is concentrated in key routes linked to major cities such as Ho Chi Minh, Ha Noi, Da Nang, Khanh Hoa, and Lam Dong; optimize pricing, operator quality, and upsell offers on these routes.
- **Develop targeted campaigns for young adults:** Users aged 18–34 generate the majority of revenue, so marketing messages, promotions, and app experience should be tailored to this core customer group.
- **Improve data quality for better decisions:** Fix outliers in price, age, and missing seat class values to improve forecasting accuracy, customer segmentation, and pricing analysis.
- **Build repeat purchase strategy:** No reorder customers were found in the provided period, so the business should test loyalty offers, post-trip retargeting, and personalized route recommendations to increase customer lifetime value.
